From my limited experience it works really well, I have a customer with more than 500 Mac's running Lync 2011 against Office 365.

Many of the customers I work with are currently making their way through an Office 365 technical pilot that needs to include Mac OS X machines as well as various versions of Windows.

vectric cut2d crack keygen 303

Firstly you will need a version of Outlook that supports Exchange Web Services (EWS).. e use one of your @ onmicrosoft com acccounts to test Lync before trying a federated account.. ~/Documents/Microsoft User Data/Office 2011 Identities/Main Identity/Database ~/Documents/Microsoft User Data/Office 2011 Identities. Bjc-5100 Drivers For Mac
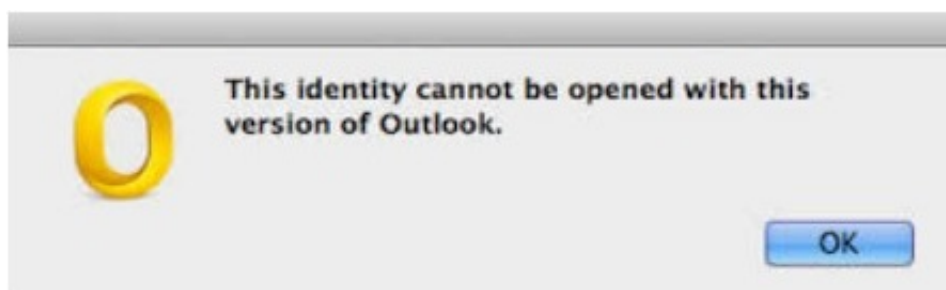

Download Skype Meetings App For Mac

Proteus Software Download For Mac
 BTW: some are saying that 365 is not ready for Lync 2011 yet Again, why would there be a client release if this were the case, and it sure seems to be working for you. 3sixty Freight Match Download For Mac

Узнать Ключ Windows 2008

Older versions of Outlook for Mac used WebDAV which is not provided in Exchange Server 2010 and therefore is also not available in Office 365.. Login and email are identical, can log in using Lync 2010 just fine Tried the onmicrosoft.. We don't have ADFS running, so our users are created straight in 365 Still doesn't work, and we're not alone by the sound of it.. The most common problem that I see with Mac's is with certficates, i e customer has chosen to use internal CA to provide their ADFS certificate and not installed the root CA certificate chain onto the Mac the other really common problem is where the UPN does not match the SMTP name, this causes a huge amount of end user confusion, remember that if you are using ADFS you need to login with your UPN not your SMTP name (They are not necessarily the same!).. If you are really struggling then call support – thats what they are there for ?.. com thing as well with no luck I'm betting there is a bug here Someone said they were watching network traffic and the Lync 2011 client would start looking at their internal AD then time out.. As a test I often try to use a managed account to bypass the ADFS infrastructure, i.. Backup (or copy) your Office 2011 identities folder located in "~/Documents/Microsoft User Data/Office 2011 identities/" Press the Option (Alt) key while clicking on Outlook to open it.. It will go into the Microsoft Database Utility mode where you can rebuild the Identity (Database).. The Windows stuff seems fairly well documented and since we now have a GA release of Lync 2011 for Mac OS X I thought I would write a post about using OS X with Office 365 Note: Most of this is documented on the following page, however it does not include Lync or any screenshots. b0d43de27c D-link Wda-2320 Desktop Adapter Driver Update
